AUTOMATIC VOLTAGE REGULATORS

### A Breakthrough in Power Protection

Servel Automatic Voltage Regulator is the safest protection system that ensures a smooth and long working life for your domestic appliances.

### Specifications

#### Voltage

Input 160-260V\* Output 200-240V

#### Rating

0.25 KVA to 5 KVA

\*For wider voltage fluctuations, special models are available.

**Solid-state models for computers and other specialised applications are also available.**

### Unique Features:

- Automatic switch-off at dangerously low or high voltage. Automatic restart on return of safe voltage.
- Built-in time delay to prevent overload on compressor.
- Advanced solid-state circuitry ensuring positive switching of relay contact making it more reliable and durable.
- Low power loss.
- Easy & instant serviceability because of Plug-in Printed Circuit Card.

Servel Group of Companies is engaged since 1975 in design, development, manufacture and marketing of sophisticated Electronic Equipment, Systems, Wires and Cables for Defence, Computer Industry, Consumer, Telecommunication and other applications.
